

Kokkuvõte 2023.a söödavarumise hooajast.

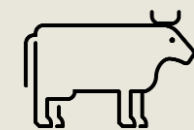

Marko Hiimäe

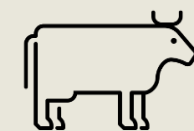

Sepa Wagyu

Ettevõtte alustas 2016 aasta 10-looma ja 23 hektari püsirohumaaga

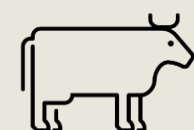

Puhtatõulised Wagjud, puhtatõulised Limusiinid (ca 100 looma)

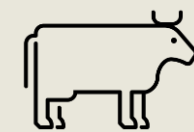

Ettevõttes majandab täiskohaga 1,5 inimest ning suvehooajal 3

Alates 2023 varume kogu koresööda ise.

Kasutame karjatmiseks programm Pasturemapi ja teeme portsjonkarjatamist.

Alates 2021 oleme mahetootjad

2024a majandame 240 hektrail (116h põllud ja 124 püsirohumaad)

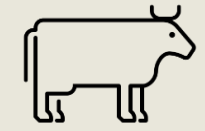

2023 Aasta talu ja 2023 Tori valla aastaettevõte

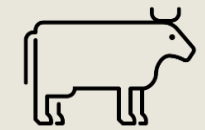

SEPA WAGYU
EST 2016

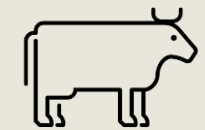

Söödavarumis plaan 2023

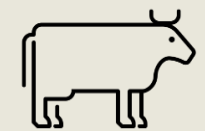

Esimest aastat varume kogu sööda ise (kvaliteet ja õige aeg)

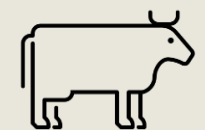

Plaanis oli 1200 rulli heina , 500 rulli silo ja 500 rulli põhku

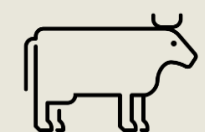

Esimest aastat kasvatasime ise vilja allakülviga

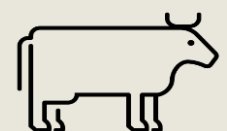

Esimest aastat kasutasime silokindluslisandeid

Pasturemapi abil tehtud karjatamisplaan

Plaanis alustada silo niidetega Mai viimane ndl ja juuni algus

Plaanis alustada heina tegu 15-20 juuni vahel

Esimene talv 2023 kus loomad saavad olema laudas

Söödavarumine tegelik 2023

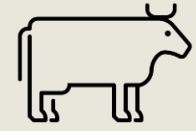

Väga külm kevad mis jätkus kuiva suve algusega

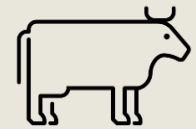

**Silo esimene niide toimus 17.06, kohati saime 5t hektarile (ca 100t).
Planeeritud 15t hektar**

Heina tegu alustasime 22.06 ja lõpetasime 05.07. 510 rulli

Silo teine niide 26.07, saime ca 8t hektarile

Silo kolmas niide 09.08, saime ca 8t hektarile

Kaerasilo 29.07, saime 9t hektarile

Kuna kaer sai siloks tehtud siis põhku polnud teha

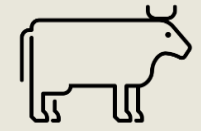

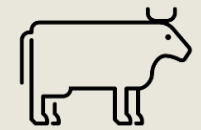

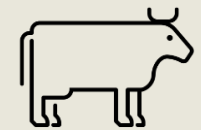

Reageerimine 2023

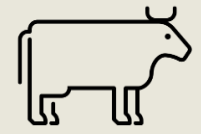

Väga kiirelt sai selgeks et olemasoleva plaaniga välja ei tule

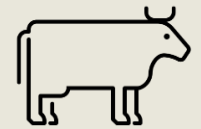

Tegime kaerasilo mis kahjuks jättis meid põhust ilma

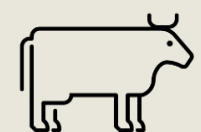

Tegime kahe silo niite asemel 3 niidet.

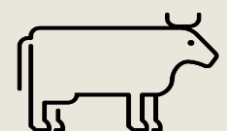

Soetasime söödamikseri

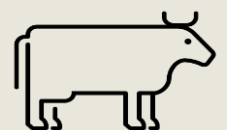

Ostsime juurde heina, see mida saadaval oli

Olime pidevas valmiduses karja vähendama ja ka vähendasime

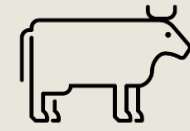

Plaanisime teha ädala silo.

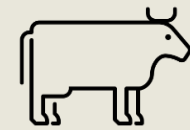

Tegime ümber korduvalt karjatamisplaani

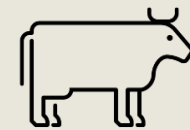

Kogemused

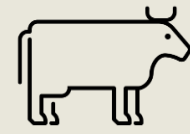

Ilma ette ei näe ja alati saab minna hullemaks (Külm, kuiv, vihmane)

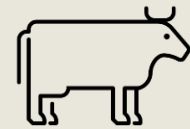

Tunne oma põlde (mullaproovid).Kui ilmastiku kindlad nad on?

Alati tee varuga ja rohkem.

Mulla tervis prioriteet

Koostöö teiste farmeritega

Kogemuste jagamine
